

Innovation Hub

Concrete Laboratory
Soil Mechanics Laboratory
High Power Laboratory
Temperature Rising Laboratory
High Voltage and Dielectric Testing Laboratories
Metrology Laboratory
Analytical Chemistry Laboratory
Fuels - Lubricants Laboratory
Laboratory of Environmental Chemistry and Special Materials
Metallography Laboratory
Applied Physics Laboratory
Laboratory of Mechanical Testing
TRSC's Photometry Laboratory
TRSC Inspection Body (for services provided to PPC SA)

PPC Innovation Hub provides services not only to the units within the PPC Group but also to third parties unrelated to the Corporation

Innovation Hub services include tests conducted at its laboratories, accreditations, investigations, inspections carried out at the facilities of PPC Group units, instrument calibration, preparation of specialised studies, applications, analyses, and specialist consultation papers as well as quality controls for materials and equipment - whether already owned or in the process of being purchased - for all manner of facilities.

The **Hub** does not just cover PPC's own needs. Quite the contrary; it has expanded its operations and provides top class scientific, **specialized** services to the wider public sector as well as to a host of Greek industries and manufacturing activities. The Centre can safely and reliably perform all these tasks not just at its own facilities but also directly on products at its clients' facilities.

The **Hub** has received accreditation from the Hellenic Accreditation System for both the ISO 17020 and ISO 17025 standards. To maintain accreditation from the Hellenic Accreditation System, the Centre periodically undergoes meticulous inspections by that body, which checks not just how the Centre operates but also evaluates the test and inspections carried out by the Centre, to determine that the measurements really are accurate and reliable.
